PREFACE

South Australian Economic Indicators is a monthly publication which contains the latest available data at the time of preparation for a range of statistical series that have been identified as indicators of economic activity in this State. In a number of cases the figures presented are preliminary and subject to revision in subsequent issues.

Written and graphic commentary have been included for many of the selected series and analysis has been augmented with the calculation of the percentage change from the previous reference period together with the presentation of comparative Australian data.

Time series information has been included to provide a historical perspective on many of the selected indicators. Future issues may be expanded to include further historical data in response to expressed user needs. This product is under continuous review and any suggestions for enhancement will be welcomed.

More detailed information on each series, including explanatory and technical notes, can be obtained from other Australian Bureau of Statistics publications or alternative data sources. To assist those seeking further information a source publication for each of the series has been documented in the statistical summary.

This issue includes the final part of a special article entitled *National Accounts, Sources and Uses: A Focus on Taxation Statistics*. Future issues will contain further articles on statistical topics which concentrate on longer term trends or other issues pertinent to the South Australian economy.

If you have any inquiries concerning this publication please contact the editor, John Callinan, telephone (08) 237 7307. All requests for statistical information should be directed to the ABS Information Service, GPO Box 2272, Adelaide SA 5001, telephone (08) 237 7100.

REVIEW

Overview

- The gross state product (GSP) grew 1.5% in the December quarter 1995 compared with the national average of 1.3%. This is the second consecutive quarter in which GSP has exceeded the national rate.
- The value of merchandise exports for February 1996 was \$478.2 million and nearly double that of February 1995.
- The value of merchandise imports for February 1996 were \$254.1 million, an increase of 0.9% on the previous month and 1.1% on February 1995.
- The trend estimate of retail turnover decreased by 0.7% in February 1996, continuing the decline of the growth rate since April.
- The trend estimate for new motor vehicle registrations in March 1996 increased 1.7%.
- The trend estimate for private new capital expenditure for the December quarter 1995 was \$451 million, an increase of 3.2% from the previous quarter.
- The trend estimate for the total number of dwelling units approved in February was 4.3% below the previous month, and 41.9% less than February 1995.
- Non-residential building approvals in February 1996 were valued at \$16.5 million and contributed 1.5% to the Australian total.
- For the March quarter 1996 the Consumer Price Index (all groups) increase of 0.4% for Adelaide was the same as the average for the eight capital cities.
- The Price Index of Materials used in House Building fell by 0.1% in Adelaide for February 1996 and by 1.3% over the past twelve months.
- Adelaide recorded a rise of 0.1% in the Price Index of Materials used in Building other than House Building for February 1996.
- At 30 September 1995 the estimated resident population of South Australia was 1,474,674. This was an increase of 0.05% (708) persons from the June quarter, which was below the national increase of 0.3%.
- The trend estimate of employed persons has generally remained flat over the past 3 months.
- The trend unemployment rate has decreased from 9.9% in March 1995 to 9.4% in March 1996.
- The trend estimate for the value of owner-occupied housing commitments for February 1996 was \$255.1 million, down 0.2%.
- Businesses expect a rise of 1.5% in sales of goods and services in the June quarter 1996 and 3.6% in the March quarter 1997 compared with the March quarter 1996.

State Accounts

NOTE: Deficiencies in the data sources used to estimate gross operating surplus for recent quarters may at times lead to the current price estimates of Gross State Product(I) being under or over stated for particular States. Consequently, the measured growth rate for constant price GSP(I) for those States will also be affected.

The constant price series for Gross State Product (GSP) have been labelled as 'experimental'. Users are cautioned that these estimates are derived indirectly by calculating a deflator from the expenditure components. It is emphasised that, at times, movements that can not be fully explained may be introduced into the constant price GSP(I) series through the use of this proxy deflator.

Trend Estimates (Current Prices) The gross state product (GSP) grew 1.5% in the December quarter 1995 compared with the national average of 1.3%. This is the second consecutive quarter in which GSP has exceeded the national rate.

Although wages, salaries and supplements grew by 1.4% in the December quarter, growth has been below the national rate since December quarter 1993.

In contrast, growth in gross operating surplus has been above the national rate for the past two quarters, with the December quarter growing by 1.6% compared with the national rate of 0.8%.

Growth in indirect taxes less subsidies has been quite strong relative to the national rate over the past four quarters with the December quarter increasing 1.2% compared with the national rate of 0.8%.

Trend Estimates (Constant Prices) The experimental GSP at constant prices grew 0.8% in the December quarter 1995 and 3.3% throughout the year.

State final demand showed no change in the December quarter compared with a national increase of 0.5%. Only Queensland (-0.1%) recorded lower growth.

**STATE FINAL DEMAND - TREND
(CONSTANT PRICES)
Quarterly Change**

For the third consecutive quarter, the rate of increase in private final consumption expenditure slowed with the 0.7% increase in the December quarter compared with the strong growth of 1.7% experienced in the March quarter 1995.

Private gross fixed capital expenditure increased by 0.6% in December, the first quarterly increase since the December quarter 1994. Increases in expenditure on equipment and non-dwelling construction more than offset the decline in expenditure on dwellings. Private gross fixed capital expenditure is now at a level 24.5% below December quarter 1994.

Public final consumption expenditure declined 2.3% in December.

International Accounts

Exports

The value of merchandise exports for February 1996 was \$478.2 million. This was an increase of 19.8% on the previous month and an increase of 98.3% on February 1995. The agriculture, forestry and fishing industry has contributed 27.1% of the total value of exports in the past three months.

MERCHANDISE EXPORTS AND IMPORTS

Imports

The value of merchandise imports for February 1996 were \$254.1 million, an increase of 0.9% on the previous month and 1.1% on February 1995. The leading commodity groups imported as a percentage of the total value of goods imported were petroleum and petroleum products which represented 17.0%, machinery 19.7% and other manufactured goods 24.2%.

Consumption and Investment

Retail Turnover

The trend estimate of retail turnover in South Australia decreased by 0.7% in February 1996, continuing the decline of the growth rate since April 1995. Over the past three months the trend estimate has declined by \$15.5 million caused by the decreases of \$12.7 million in hospitality and services group, and \$7.1 million in the food retailing group. Clothing and soft good retailing showed an increase of \$2.6 million, with all other groups recording small increases.

The seasonally adjusted estimate of retail trade in February 1996 increased 1.4%. In original terms, South Australian retail turnover was \$691.4 million, an increase of 8.1% on February 1995.

RETAIL TURNOVER
PERCENTAGE CHANGE FROM PREVIOUS MONTH
Trend

New Motor Vehicle Registrations

The South Australian trend estimate for new motor vehicle registrations in March 1996 increased 1.7%. This is a continuation of trend increase which commenced in October. The seasonally adjusted estimate for March 1996 decreased by 2.7% from February 1996 but increased 4.9% on March 1995.

In original terms there were 3,866 new motor vehicles registered in March 1996. For new passenger vehicles, the leading makes registered were Holden (868 vehicles), Ford (735), Mitsubishi (500), Toyota (460), and Hyundai (155).

Tourist Accommodation

When the December quarter 1995 is compared with the December quarter 1994, the number of holiday flats, units and houses available for short-term letting decreased by 4.6%. Unit nights occupied fell by 3.1% while the unit occupancy rate increased from 40.0% to 40.3%. Accommodation takings rose by 4.0% from \$3.0 million to \$3.1 million while average takings per unit night occupied rose from \$61 to \$65.

Private New Capital Expenditure

The trend estimate (in current prices) for private new capital expenditure in South Australia for the December quarter 1995 was \$451 million. The increase of 3.2% from the previous quarter is a reversal of trend decline which commenced in March quarter 1995. The increase in figures for South Australia was higher than for any other State with the Australian figure rising by 0.6%. The South Australian total for the quarter now represents 5.0% of the Australian figure.

Private new capital expenditure in original terms for the December quarter 1995 was \$536 million, an increase of 49.2% from the September quarter 1995. Buildings and structures accounted for \$87 million, and equipment, plant and machinery \$449 million. Expenditure for the 1995 year fell by 5.3% from 1994 with the Australian figure rising by 12.7%.

Production

Dwelling Approvals

The trend estimate for the total number of dwelling units approved in South Australia in February was 4.3% below the previous month, and 41.9% less than February 1995.

The trend for the number of private sector houses approved dropped 2.1%. This follows falls of 2.3% in January and 2.7% in December 1995.

The number of dwelling units approved in original (unadjusted) terms for South Australia in February was 486 an increase of 36.9% on January 1996 (355).

The national trend estimate for the number of dwelling units approved in February 1996 (10,096) was marginally above January (10,093), and 23.5% lower than February 1995.

In original terms the total number of dwelling units approved in Australia in February 1996 was 10,109, an increase of 21.7% on January 1996, and was 17.3% lower than February 1995.

DWELLING UNITS APPROVED

Dwelling Commencements

The number of new dwelling units commenced in South Australia continued to fall during the December quarter 1995. It was down 11.5% to 1,557. This compares with a fall of 10.8% nationally. There was a decrease of 45.1% in South Australia and 34.2% nationally when compared with the December quarter 1994. Expressed as a proportion of the national total, the number of commencements in South Australia was 5.2% compared with 5.2% last quarter and 6.2% for the December quarter 1994.

NEW DWELLING UNITS COMMENCED

Value of Non-residential Building Approvals

Non-residential building approvals for South Australia in February 1996 were valued at \$16.5 million. There were 3 projects in the \$1 million to \$5 million category.

In February 1996, South Australia contributed 1.5% towards the total value of Australian non-residential building approvals of 1,087.7 million.

Value of Total Building Activity

The total value of building work commenced in South Australia during the December quarter 1995 rose 1.9% from the previous quarter to \$285.8 million. Compared with the December quarter 1994, South Australia had an 18.9% decrease in building commencements while the corresponding national movement was a 17.2% decrease. The South Australian share of the national total of building commencements was 4.8% for the December quarter.

The total value of building work done during the December quarter 1995 rose 9.2% to \$327.1 million compared with a decrease of 2.4% nationally. Compared with the December quarter 1994, South Australia had a 15.0% decrease in the value of total building work done while the corresponding national movement was a 6.8% decrease.

VALUE OF BUILDING ACTIVITY

Value of Engineering Construction In the December quarter 1995 the value of engineering construction work done in South Australia rose by 19.8% (16.0% nationally) to \$169.5 million. South Australia had a 4.5% share of the national total. The value of work commenced during the quarter rose by 6.0% to \$144.0 million compared with a national decrease of 41.7%. The State's proportion of national commencements was 4.9%.

Prices

Consumer Price Index

For the March quarter 1996 the Consumer Price Index (all groups) increase of 0.4% for Adelaide was the same as the average for the eight capital cities. The annual increase for Adelaide was 3.2% while nationally the Consumer Price Index increased 3.7%.

CONSUMER PRICE INDEX
Change from Previous Quarter

House Building Materials

The Price Index of Materials used in House Building fell by 0.1% in Adelaide for February 1996 over the past month. The weighted average for the six State Capitals fell 0.3%. For the past twelve months the Index fell 1.3%, with the weighted average of the six State capitals falling of 0.6%.

The decrease in the price for ready mix concrete, softwood timber and plastic pipes has caused the fall in the Index.

Non-house Building Materials

Adelaide recorded a rise of 0.1% in the Price Index of Materials used in Building other than House Building for February 1996 over the past month. The weighted average of the six State Capitals showed no movement. Over the past twelve months a rise of 1.0% was recorded in the Index for Adelaide while the weighted average of the six State capitals showed a 1.7% rise.

The increase in price of ready mix concrete was the main cause in the increase over the last month.

House Prices

The price index of established houses and project homes in Adelaide fell 2.3% and 0.4% respectively during December quarter 1995. Nationally, over the same period prices for both established houses and project homes fell by 0.2%.

In Adelaide over the twelve months to December quarter 1995, there was a price decrease of 3.0% for established houses and a decrease of 2.0% for project homes. Nationally, for the twelve month period, established house prices recorded a 0.3% increase while project homes rose by 1.0%.

Labour Force and Demography

Population

At 30 September 1995 the estimated resident population of South Australia was 1,474,674. This was an increase of 0.05% (708) persons from the June quarter, which was below the national increase of 0.3%. The continuing low growth rate for South Australia is attributable to a large net outflow in interstate migration of 2,157 persons which was offset by a net inflow of overseas migration of 1,106 persons and a natural increase of 1,759. The quarterly interstate migration loss was the highest recorded from South Australia.

Employment

The trend estimate of employed persons in South Australia has generally remained flat over the past 3 months, following a slight decrease between September 1995 and December 1995. The March 1996 estimate (655,600) is almost one per cent higher than the level of 12 months ago.

In March 1996, the trend estimate of employed persons in Australia was 8,321,800. This was 1.8% higher than the level of 12 months ago. In the 12 months to March 1996, full-time and part-time trend employment estimates have increased by 1.7% and 2.1% respectively.

Unemployment

The trend unemployment rate for South Australia has decreased from 9.9% in March 1995 to 9.4% in March 1996. Over the same period, the trend unemployment rate for males has decreased from 10.8% to 10.2%, while the rate for females has decreased from 8.8% to 8.4%.

The provisional trend estimate of the unemployment rate in Australia has remained at 8.4% for the past 11 months.

Overtime

The proportion of employees who worked overtime in South Australia in February 1996 was 13.8%, compared with 16.3% in February 1995.

Industrial Disputes

There were 300 working days lost through industrial disputes in South Australia during January 1996. At 1.5% of the national total (20,000), South Australia experienced the lowest level of industrial disputation of all the States.

In the 12 months to January 1996, 15,300 working days were lost due to industrial disputes in South Australia.

Short term Overseas Visitor Arrivals

The estimated number of short term overseas arrivals staying in South Australia in December 1995 was 8,574 a decrease of 2.0% over the previous month but an increase of 9.4% on December 1994. The South Australian share of the Australian total was 2.0%.

SHORT TERM ARRIVALS AND DEPARTURES

*Short term Resident Departures*

During December 1995 the number of short term departures of South Australian residents was 10,760, a 47.5% increase over the preceding month but a 6.7% decrease on December 1994.

Incomes

Average Weekly Earnings

The trend estimate of average weekly ordinary time earnings of full-time adult employees in South Australia fell from \$615.00 in August 1995 to \$613.70 in November 1995. Male full-time ordinary time earnings decreased from \$641.60 in August 1995 to \$641.50 in November 1995. Over the same period, the comparable level for females decreased from \$558.40 to \$553.40.

Between August 1995 and November 1995, the trend estimate of average weekly total earnings of all employees in South Australia decreased from \$514.10 to \$510.90.

Since it is an average of earnings across all employees, changes in average weekly earnings may occur through changes in employment as well as changes in pay levels.

Award Rates of Pay

Over the 12 months to February 1996, the weekly award rates of pay index for full-time employees in South Australia increased by 1.5%.

For full-time adult male employees, the largest annual movement of the index occurred in the electricity, gas and water supply industry division, with an increase of 3.6%.

For full-time adult female employees, the largest annual movements of the index occurred in the manufacturing and finance, property and business services industries, each with an increase of 1.9%.

Financial Markets

Housing Finance

The trend estimate for the value of owner-occupied housing commitments for February 1996 was \$255.1 million, down 0.2% over the previous month. This fall was against the national trend which rose 1.5%. The State trend estimate has remained fairly constant since September 1995.

**SECURED HOUSING FINANCE COMMITMENTS
TO INDIVIDUALS (ALL LENDERS)
(Excluding Alterations and Additions)
Monthly Total**

Total housing finance commitments (original figures including alterations and additions) increased by 16.7% to \$285.2 million compared with the previous month and up by 20.6% on February 1995. Finance commitments for construction of dwellings increased by 29.8% to \$27.9 million compared with the previous month but were 8.9% lower than February 1995. The national fall over those twelve months was 2.3%. Finance commitments for the purchase of established dwellings, the largest category, were up by 14.3% to \$166.0 million in February and up by 8.4% compared with the previous February. The national increase in commitments for established dwellings over those twelve months was 13.2%. Commitments for the purchase of newly erected dwellings increased by 31.7% to \$13.0 million, up by 61.3% on February 1995.

Refinancing (original series) accounted for 20.3% of housing commitments to individuals continuing the high proportion evident since June 1995. Alterations and additions reached \$20.6 million to be 7.2% of the total.

Personal Finance

Personal finance commitments increased by 2.1% to \$179.2 million during February compared with the national increase of 2.8%.

Fixed loan commitments increased by 4.0% to \$129.7 million, the highest February figure this decade. The biggest increase was recorded against refinancing which increased 21.8% to \$28.9 million, 52.9% above the previous February. Sales of used motor vehicles and station wagons, the largest category, decreased by 6.1% to \$39.6 million during the month, 11.0% above February 1995. New motor vehicles and station wagons commitments during February remained at \$11.4 million, 23.5% lower than February 1995 compared with the national decrease over the year of 3.4%.

Personal finance commitments under revolving credit facilities decreased by 2.5% to \$49.6 million during the month, 4.2% below February 1995. Secured personal finance commitments under revolving credit facilities increased by 10.3% to \$20.3 million and unsecured decreased for the third consecutive month, down by 9.7% to \$29.3 million, but still 10.4% above the previous February.

**PERSONAL FINANCE COMMITMENTS
(ALL LENDERS)
Monthly Total**

Lease Finance

The value of goods under new finance lease commitments increased during February by 79.9% to \$23.4 million, 35.2% above February 1995. This followed the very low January figure when South Australia's proportion of the national figure was down to 2.8%, compared with 4.0% in February, its normal level.

New motor vehicles and station wagons not subject to depreciation, the largest category, increased by 13.6% to \$3.9 million (26.3% below the previous February) while those subject to depreciation increased marginally by 0.2% to \$1.3 million. Used motor vehicles and station wagons not subject to depreciation however fell by 21.9% to \$2.4 million while those subject to depreciation were up significantly after a very low January. Commitments for construction and earthmoving equipment reached \$4.2 million, the highest month since July 1990. The other major increase was for electronic data processing equipment which rose to \$4.1 million.

Forward Outlook

Composite Leading Indicator

The Composite Leading Indicator (CLI) is a single time series produced by aggregating eight individual economic indicators, and has been developed by the ABS as an experimental series to supplement existing forms of economic analysis and modelling.

The CLI summarises the early signals contained in a selection of economic indicators and is designed to assist the detection of turning points between successive expansions and slow downs of economic activity as measured by constant price GDP(A). It does not attempt to forecast the level of economic activity.

In the December quarter 1995 :

- the experimental CLI fell 0.07%, the fifth consecutive fall since the September quarter 1994 peak. However the rate of fall eased from 0.29% in the September 1995 quarter.
- the last turning point in the CLI is coincident with the last turning point in the reference series (deviations in the trend growth rate of GDP(A) from its historical long-term trend).

The quarterly data are released in more detail in the *Australian Economic Indicators* (1350.0). The CLI was the topic of the Focus article in the September 1993 edition of *South Australian Economic Indicators* (1307.4).

Australian Business Expectations

Surveys of business expectations have been available to decision makers for a number of years from several sources. These surveys provided *qualitative* indicators in the form of the net proportion of businesses expecting a rise or fall in future business conditions. Since the December quarter 1993, the ABS has been compiling a quantitative indicator of business expectations in the form of an expected weighted aggregate change in a range of economic variables. These data are available on a quarterly basis in *Australian Business Expectations* (5250.0).

AUSTRALIAN BUSINESS EXPECTATIONS SOUTH AUSTRALIA AND AUSTRALIA SALES OF GOODS AND SERVICES EXPECTED PERCENTAGE AGGREGATE CHANGE

Reference Period	Short term (a)		Medium term (b)	
	South Australia	Australia	South Australia	Australia
1994				
September quarter	4.5	2.3	3.2	4.1
December quarter	-0.1	-0.5	2.8	3.3
1995				
March quarter	1.8	1.4	1.1	3.0
June quarter	0.2	1.3	0.8	2.3
September quarter	1.6	2.1	2.4	3.4
December quarter	0.6	-0.2	2.5	4.4
1996				
March quarter	1.5	2.3	3.6	4.1

(a) Short term is the following quarter.

(b) Medium term is the same quarter in the following year.

Short term

Businesses in South Australia expect a rise of 1.5% in sales of goods and services in the June quarter 1996 compared with the March quarter while the national expectation was a 2.3% increase.

Medium term

Businesses in South Australia expect sales of goods and services in the March quarter 1997 to be 3.6% above March quarter 1996. Australia wide the expectation was for 4.1% growth.

PC AUSSTATS

Online access to the latest statistical information from the ABS

The most accessible statistics in Australia . . .

With PC AUSSTATS, getting access to ABS information has never been easier.

Online, all the time . . .

You'll never be without vital information again. PC AUSSTATS will let you access the information you need, when you need it — 24 hours a day, 7 days a week.

You can connect to the ABS database and find the information you want, simply and quickly. And once you've selected the information, downloading to your PC is done for you by the PC AUSSTATS software.

Ready to go . . .

Once downloaded, the data is in .wks format — compatible with all the most common spreadsheet packages available today — so it's ready for instant analysis and manipulation on your own PC.

And with thousands of series covering the most important economic and social data, it's like having your own private ABS library — with librarian.

With the latest information . . .

By using PC AUSSTATS, you will know that you have the latest information available.

The main PC AUSSTATS database is updated daily, giving you full access to the latest facts and figures about the nation.

Plus, you don't have to worry about revisions or corrections to the data — the PC AUSSTATS database is updated in line with any revisions to our printed publications.

. . . and a historical perspective

The database that you access with PC AUSSTATS gives you time series data.

So you get not only the latest information, but also a historical perspective — and this gives you the base you need to perform your own trend analysis.

Historical information is typically available for a 15 year period for all series on PC AUSSTATS — and this includes monthly, quarterly, half yearly and yearly series.

Arrange a demonstration today . . .

FOCUS

National Accounts, Sources and Uses: A Focus on Taxation Statistics - Part Two

This is the concluding part of an article contributed by Peter Comisari, Australian Bureau of Statistics, Canberra.

THE NATIONAL ACCOUNTS AND THE UNDERGROUND ECONOMY

The National Accounts Branch is keen to quantify the understatement of income (or overstatement of expenses) in taxation statistics. However, this item represents just one component of the so-called "hidden" or underground economy. To put understatement of income into its national accounts context, it is necessary to outline what is meant by the hidden economy. Broadly speaking, the hidden economy represents all of those production activities that should be included in GDP, but which may be missed because one or more of the parties involved tries to hide them from the relevant public authority. More specifically, the hidden economy could be thought of as comprising the following activities:

- (a) economic activities that are legal in their own right but which are deliberately concealed from the authorities so as to avoid paying tax or government charges;
- (b) production of illegal goods and services; and
- (c) employee theft (which should be recorded as wages and salaries rather than as intermediate consumption).

A failure to cover these activities will result in measured GDP falling short of the ideal concept of GDP, that is, as it is defined in SNA93. Such a failure will lead to national accounts aggregates which understate the size and possibly the growth rate of the economy, which contain biased saving ratios, and which present a misleading picture of the structure of the economy. In terms of the three categories above, income tax statistics will not record the activity in relation to (a). They will probably not record a great deal of income relating to item (b) but they will probably treat most employee theft (item (c)) as current business expenses rather than as wages and salaries.

There are a number of approaches to measuring undeclared legal activity (item (a) above). However, the most common method used world wide is to compare estimates of GDP derived from independent sources, that is, to compare GDP(I), GDP(E) and, if produced, GDP(P). It is usually assumed that the income flow generated by an unrecorded (but legal) transaction will be concealed by the recipient but the expenditure will usually be reported by the purchaser. Consequently, some or all of the excess of GDP(E) over GDP(I) can be attributed to unrecorded legal transactions. This approach has been used in Australia in conjunction with more direct estimates of understatement (see below).

Another approach is to use statistics from income tax audits. If the audit system is based on a random sample of taxpayers the under-reporting revealed by the audit can be applied to the national population

of taxpayers. Audits based on non-random samples are less useful for this purpose since they are likely to provide a biased estimate of the level of understatement. For example, audits that target a particular industry or group of taxpayers who are identified as likely to be understating their income are not random sample audits.

There have been numerous attempts to determine the extent of the hidden economy in various countries by examining the nature of the use of currency within the economy. At the most basic level this approach involves considering the ratio of the volume of currency in circulation, C, to demand deposits, D. An increasing C/D ratio is argued to reflect a greater relative use of cash as the hidden economy grows. Of course, such an approach is sensitive to the base year chosen and cash holdings may increase relative to money supply for a number of reasons, not necessarily connected with the hidden economy. (Works on this approach include Gutmann (1977) in the USA and Tucker (1982) in Australia.) Although a variety of more sophisticated econometric models has been constructed using this particular approach to measure the hidden economy, such models typically rest heavily on assumptions that are difficult or impossible to test (examples of such work include Hepburn (1992) in Australia and Tanzi (1982), Isachsen et al (1982), and Bhattacharyya (1990) overseas).

A further option is one best described as the "expenditure approach". It was used in a paper by N.W.F. Fisher of the Bureau of Labour Market Research (1983). Fisher examined only the expenditure side of the national accounts. He assumed that unrecorded transactions in the public sector are likely to be negligible in a country like Australia. This allowed him to concentrate on private final consumption expenditure, private gross fixed capital expenditure and increase in stocks held by the private sector as potential areas for the "hidden" economy to be exposed. For each of these three items (but particularly private final consumption expenditure and private gross fixed capital expenditure) the aggregates were dissected as far as possible. The approach then involved building up an intimate knowledge of each of the categories for which estimates were produced so that judgements could be made about the likely extent of understatement for each category. While such judgements are necessarily subjective, they are likely to be more accurate when applied to individual items of private final consumption expenditure and capital expenditure than when applied at the broad economy level. An advantage of this method is that estimates for all components of the hidden economy (ie, items (a) to (c) above) can be jointly estimated.

In relation to item (b) above, SNA93 specifically recommends that production of illegal goods and services be included within the production boundary, that is, they should form part of GDP. Intuitively, this would include production relating to illegal

drugs, illegal prostitution and illegal gambling. A lack of source data prevents most countries from explicitly including illegal production in their national accounts. Those countries which have tried to measure illegal production usually employ somewhat dubious methodologies in attempting to measure a subset of total illegal production. For example, estimates relating to the illegal importation and subsequent domestic distribution of cigarettes have been included in the Italian national accounts. Imports, wholesale and retail trade and private final consumption expenditure in the Italian national accounts have all been adjusted to include the effects of the illegal cigarette trade. However, these estimates have been based mainly on records of seizures of contraband cigarettes by customs authorities - records that would intuitively not provide the means to accurately measure the extent of illegal distribution.

Employee theft includes direct theft of materials and supplies by employees from the place of work and office fraud, for example, falsification of expense accounts and the use of employers' property for private purposes. The effect of these activities is to understate GDP because goods and services stolen by employees are mistakenly treated in the employers' accounts (and therefore the national accounts) as intermediate consumption rather than as wages and salaries. There are no reliable national statistics on the extent of employee theft.

UNDERSTATEMENT OF INCOME IN TAXATION STATISTICS

This section narrows the focus to deal specifically with the understatement of income (and overstatement of expenses) in ATO taxation statistics. National accounts estimates of gross operating surplus for the private sectors of the economy depend mainly on income tax data from the ATO. Consequently any understatement of income in the aggregate income tax statistics will flow on to the national accounts unless the national accountants make explicit adjustments for such understatement. Understatement of income in the data used to compile gross operating surplus estimates for private corporate trading enterprises and non-farm unincorporated enterprises in the national accounts can arise from any of the following three possibilities:

- (a) understatement of income or overstatement of expenses in respect of taxpayers that are included in the data provided to the ABS;
- (b) omission of information for some taxpayers because the data are not included in the tabulations/files supplied to the ABS (eg. data reported to the ATO but not included in statistical extractions, or late returns not lodged by the time the statistics are extracted); and
- (c) omission of information for some businesses because they do not comply with the requirement to lodge taxation returns.

The ABS has applied an upward adjustment factor to the estimates of non-farm unincorporated enterprise income and company income since the 1984-85 issue of the annual accounts (\$204.0). The current system used to adjust for the understatement of business income in taxation statistics evolved from initial estimates of the revenue foregone through understatement of business income in tax returns which

were produced by the ATO and included in the June 1985 Draft White Paper "Reform of the Australian Tax System".

The ABS used the estimates of revenue foregone in the Draft White Paper in order to estimate the extent of understatement in the incorporated and non-farm unincorporated enterprises sectors. These calculations took into account information about the recoupment of revenue through enforcement activity, the impact of the introduction of the prescribed payments system (PPS) and the practice of claiming ineligible expenditure to incorrectly obtain an investment allowance deduction. The ATO subsequently provided the ABS with estimates of the understated income implicit in ATO estimates of revenue foregone. These estimates were used to modify the initial ABS estimates of understatement of income.

The estimates of understatement of income in the taxation statistics which emerged from this process were compared with trends in the national accounts statistical discrepancy, suggesting that ABS income-based estimates were understated. In order to derive a time series of estimates of understatement, links were established between the pattern of the statistical discrepancy, ATO estimates of understatement, anecdotal evidence of tax evasion and the likely impact on compliance of changes to taxation legislation. The adjustment factors are periodically reviewed, though the basis for making changes to the factors is necessarily largely subjective. Changes in taxation legislation and taxation audit policy (eg. introduction of the prescribed payments system in the construction industry) are assessed when making changes to the allowances for understatement of income in taxation statistics.

USE OF NATIONAL ACCOUNTS DATA IN MEASURING NON-COMPLIANCE

For internal management purposes the ATO would need to regularly estimate the extent of non-compliance in the business sector in relation to income tax and other taxes such as sales tax and fringe benefits tax. Similarly, estimates would be required of the extent of non-compliance by individuals in relation to income tax. Obviously the ABS would be interested in those estimates of understatement of business income relating to both companies and non-farm unincorporated businesses. If ATO estimates of business non-compliance are directly or indirectly derived using national accounts estimates for incorporated and unincorporated enterprises income, then there could be a problem. Since the ABS derives its estimates of incorporated and unincorporated enterprises income from taxation statistics and since these estimates are adjusted upwards to counter inherent understatement of income (on the basis of factors that are either dated, or at least partially subjective) any attempt by ATO to use national accounts data to estimate non-compliance in the business sector will necessarily involve a degree of circularity. It is therefore important that due allowance is made for the way in which the national accounts estimates of incorporated and unincorporated enterprises income are compiled, when preparing estimates of the extent of non-compliance by businesses in relation to income tax.

Appendix : ROLE OF THE NATIONAL ACCOUNTS

National accounts are designed to provide a systematic summary of national economic activity and have been developed to facilitate the practical application of economic theory. At their summary level, the national income, expenditure and product accounts reflect the key economic flows of the Keynesian system: production, income, consumption, investment and saving. At their more detailed level they are designed to present a statistical picture of the structure of the economy and the detailed processes that make up domestic production and its distribution.

The national accounts show key economic aggregates which are generally accepted as indicators of the state of the economy. Trends in national income and in related aggregates such as gross domestic product give us an immediate indication of how the economy fared in the past year and provide a basis for predicting what is hoped to be achieved in the coming year.

PURPOSES OF THE NATIONAL ACCOUNTS

Within the constraints of the principles and practices of business and government accounting, national accountants attempt to construct a statistical picture of the key economic processes centred around the measurement of market-based activity (ie, activity associated with the production of goods and services resulting in income generation, sales to overseas markets, domestic consumption and capital formation). National income and other indicators of economic growth measure an important aspect of a country's well-being. However, they do not necessarily provide an indicator of the ultimate (but less quantifiable) objectives relating to the improvement of the welfare or 'quality of life' status of the people.

USE OF NATIONAL ACCOUNTS IN NATIONAL PLANNING AND DECISION MAKING

National Accounts are powerful tools of public policy. In one form or another they find their way into activities such as the following:

- (a) Quarterly national accounts are well established in Australia as a central organising framework for monitoring the current performance of the economy (eg, in regard to the pattern of income flows, the strength and composition of demand, capital formation and output).
- (b) In terms of short-term forecasting of economic activity, the quarterly and annual national income, expenditure and product accounts provide a framework for attempts to determine future economic prospects and to anticipate impending crisis situations.
- (c) The national accounts provide the general setting for planning and presenting the Australian Government's annual budget. It was in this context that the forerunner to the present national accounts, the *Budget Paper - National Income and Expenditure*, was produced.
- (d) The models for forecasting economic activity and for simulating the effects of policy on the behaviour of the economy are heavily

based on the disciplined data available in the national accounts.

- (e) Studies of the structure of income, of the composition of demand, and of the industrial composition of production are necessarily based on national income, expenditure and product accounts and input-output studies. The accounts can tell us a great deal about this directly and provide a framework for the more detailed supporting statistics.
- (f) Contributions to international organisations (eg, the United Nations) and eligibility for international aid depend on national accounting measures, such as gross national product per capita. Investigations by aid agencies invariably begin with a study of the economy in terms of standard national accounting presentations.

INDIRECT USES OF NATIONAL ACCOUNTS

There are many other areas of application of national accounts in national planning and management.

- (a) In a sense, all uses of economic statistics are made against the background of the economic relationships exhibited in a system of national accounts. This is true even where the national accounts of a country are not well developed in terms of the number and detail of the accounts and tables presented, or where the estimates have a considerable element of conjecture because of the poor quality of the supporting basic statistics. In such cases, the accounts at least show the logical relationships between the various economic flows and provide orders of magnitude which may set the particular use of economic statistics into a broad perspective and guard against gross misunderstanding of their meaning.
- (b) In addition to the direct use of national accounts estimates in economic planning and management at various levels, the accounts have indirect but important uses. Thus the accounts are also in demand as a tool for illustrating economic theory. In fact, much of the treatment of national accounts in economics textbooks has tended to concentrate on using them to illustrate macro-economic theory rather than to teach national accounting as such. In the development of the national accounts the identities of Keynes' *General Theory of Employment, Interest and Money* have been a strong influence on their design.
- (c) The national accounts are also used as a framework for the co-ordination of statistical systems. With the growing emphasis on extending and integrating the various forms of national accounting there are few areas of economic statistics which do not provide at least some building blocks for constructing national accounting statistics or related analyses of them. In consequence the availability of the national accounts' definitional system and the pressure placed on existing statistical programmes to provide the data for compiling national accounts estimates

make the national accounts a powerful force in the integration of statistical collections.

ABS PUBLICATIONS AND PRODUCTS

Statistics collected by the ABS are generally made available in published form. Some, including those not published, are available in one or more of the following forms: microfiche, magnetic tape, computer printout, CD, floppy disk, photocopy and clerically extracted tabulation.

Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues on Tuesdays and Fridays a *Release Advice* (1105.0) which lists publications to be released within the next few days. The Catalogue and Publications Advice are available from any ABS Office.

To receive ABS publications on a regular basis contact the *ABS Publication Mailing Service* on 1800 02 0608.

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS Office.

The *ABS Information Consultancy Service* has specialist staff to assist and advise clients with their statistical inquiries. For more detailed

information about these services call at the ABS, 55 Currie Street, Adelaide, telephone the Information Officer on (08) 237 7100, or write to Information Service, ABS, GPO Box 2272, Adelaide SA 5001.

The ABS also provides a *Statistical Consultancy Service*, for expert assistance in survey, sample and questionnaire design, data collection, processing and analysis, and statistical modelling. For more information contact Gary Niedorfer, telephone (08) 237 7379.

SYMBOLS AND OTHER USAGES

n.a.	not available
n.y.a.	not yet available
..	not applicable
0, 0.0	nil or rounded to zero

Where figures have been rounded, discrepancies may occur between sums of the component items and totals.
